The Kavli Foundation

# Entangles KICP Experiments

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Roles Played by KICP Theorists

- Elucidation of predictions for cosmological observables
- Development and implementation of techniques to connect observations to theories
- Investigation of the discovery potential of experimental projects
- Development of new theories as the data require it

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Roles Played by KICP Theorists

- Elucidation of predictions for cosmological observables
- Development and implementation of techniques to connect observations to theories
- Investigation of the discovery potential of experimental projects
- Development of new theories as the data require it

(require for a theorist =  $2\sigma$ !)

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Substructure

- Ultra-high resolution sims of halo substructure

Z=40.52

Kravtsov

The National Science Foundation

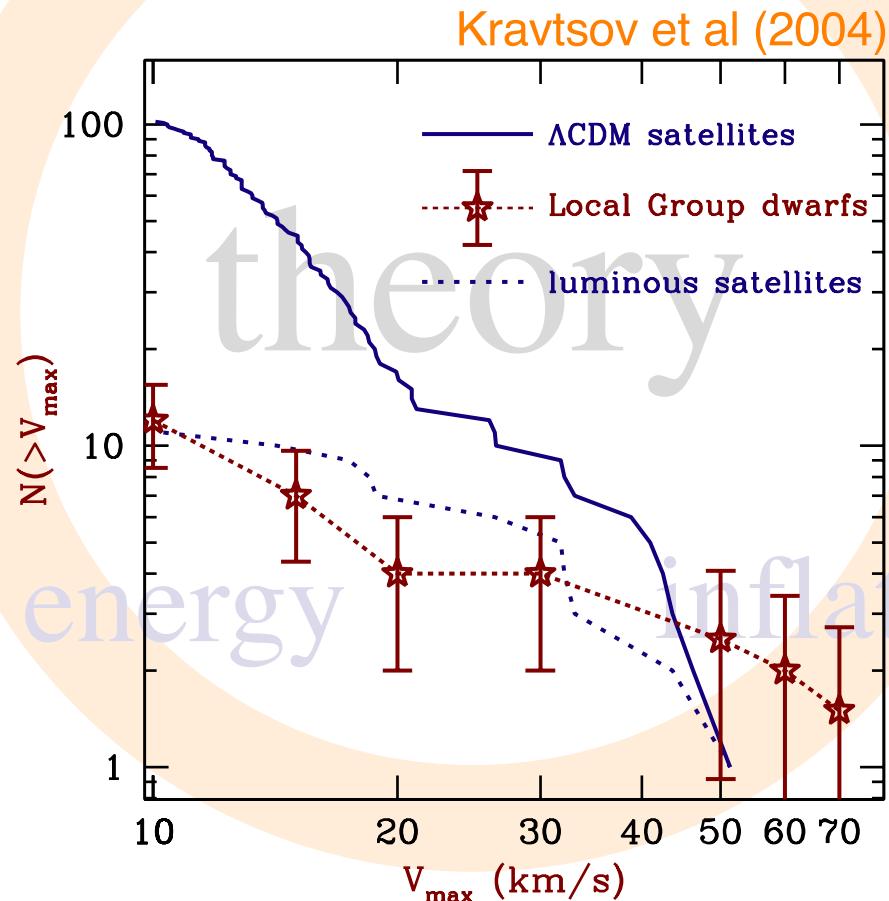

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Substructure

- Reconciling halo substructure with dwarf satellite abundance: tidal stripping of luminous satellites

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

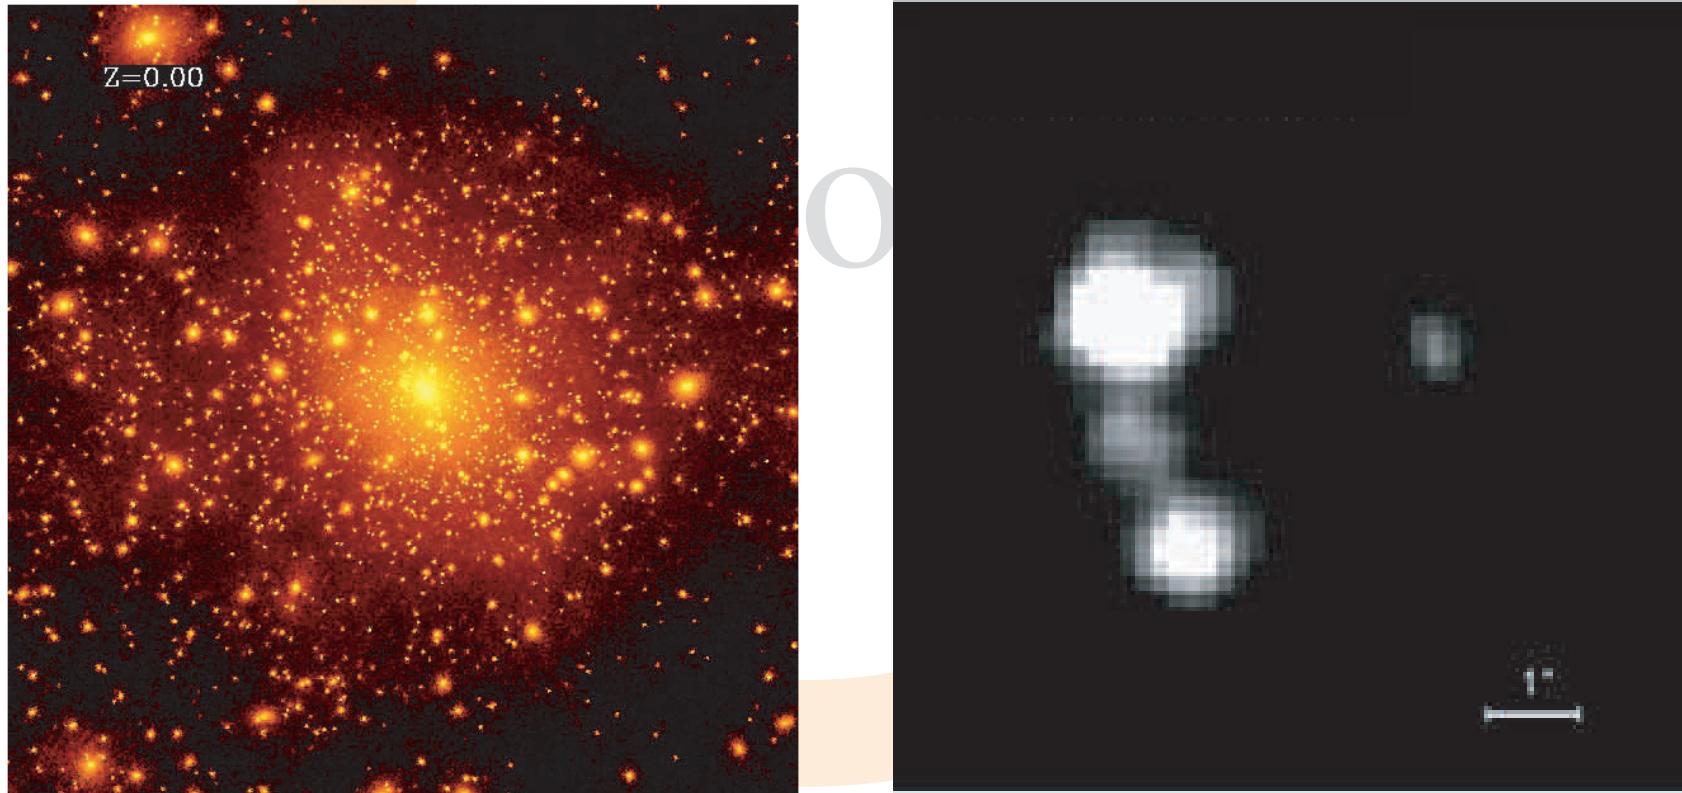

The Kavli Foundation

# Dark Matter: Substructure

- Detection in anomalous flux ratios of multiply imaged quasars? – projection & modelling

Chen, Kravtsov, Keeton (2003); Rozo, Zentner, Bertone, Chen (2005)

The National Science Foundation

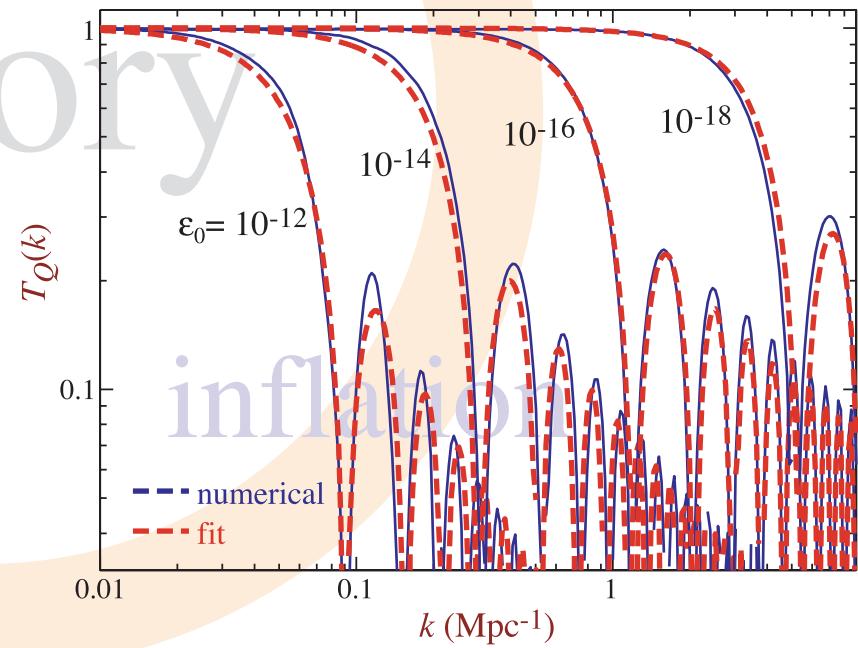

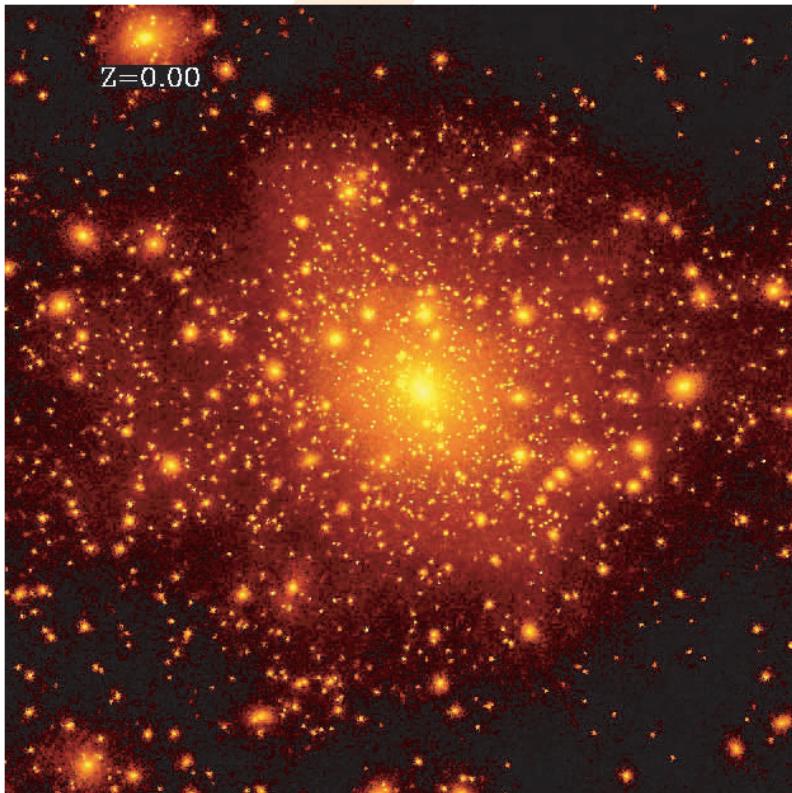

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Substructure

- Substructure constrains ghost condensate "unified" dark matter/energy Giannakis & Hu 2005

The National Science Foundation

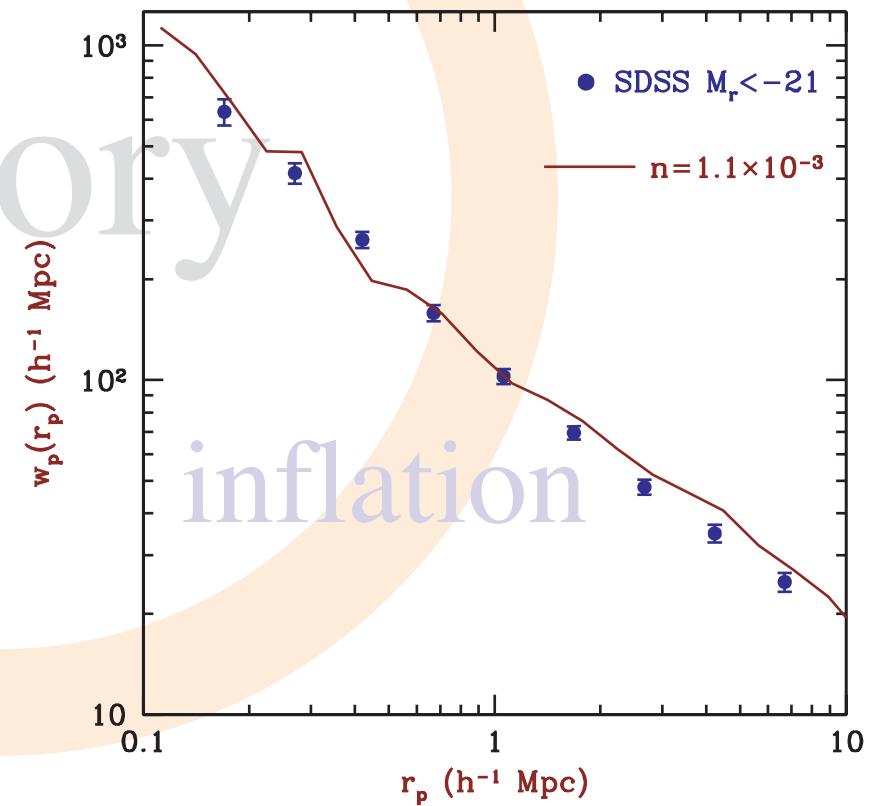

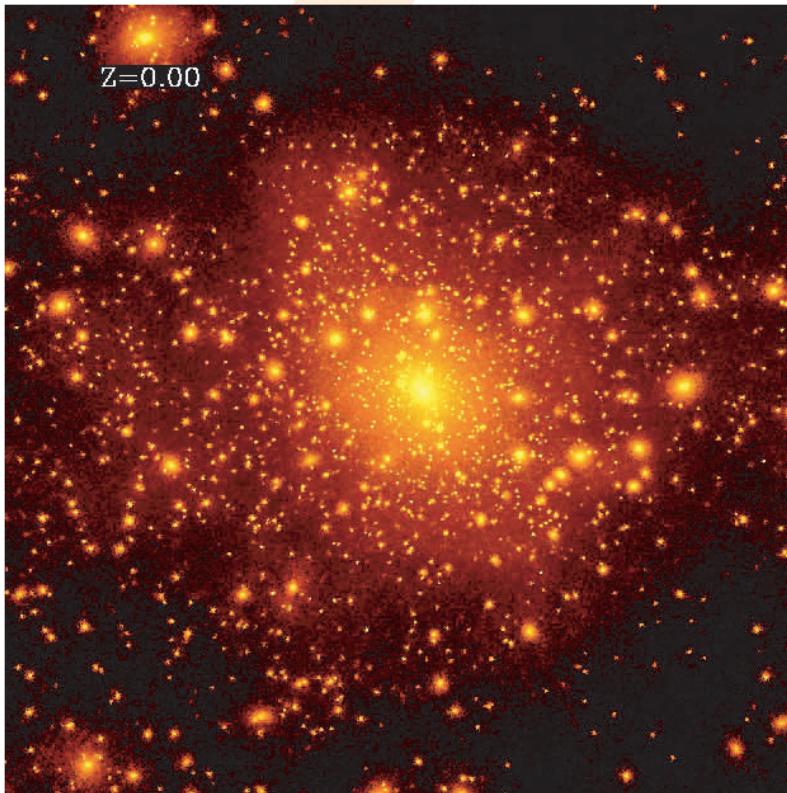

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Galaxy Clustering

- Associating galaxies with dark matter halos models galaxy clustering: SDSS, DEEP2, Subaru  
Zehavi et al (2004a,b); Kravtsov, Berlind, Wechsler (2004); Zentner et al (2005)  
Conroy, Wechsler, Kravtsov (2005)

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

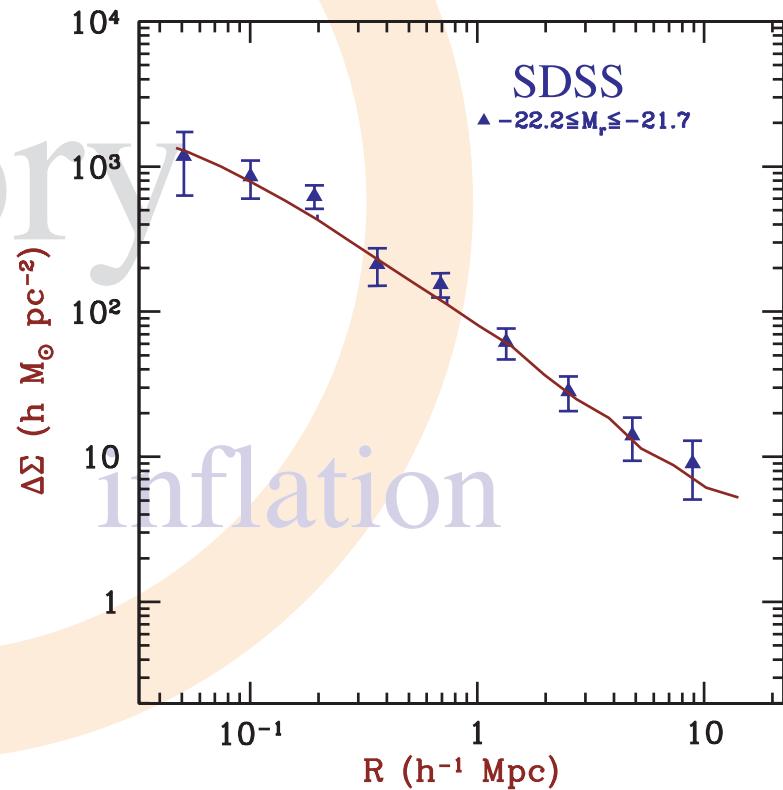

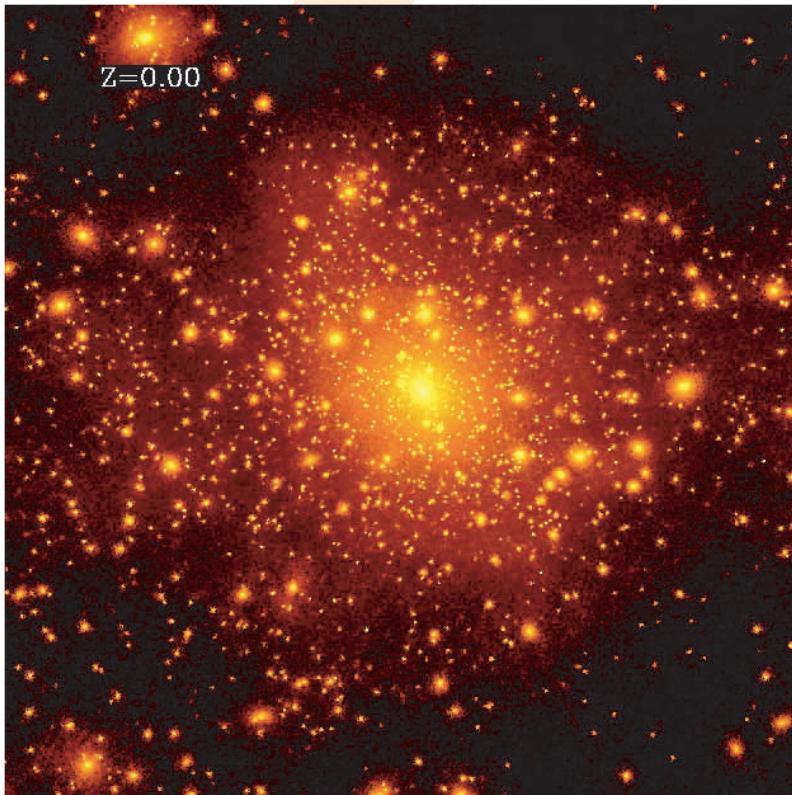

The Kavli Foundation

# Dark Matter: Galaxy-Mass Correlation

- Modelling of galaxy-galaxy lensing through the halo substructure & galaxy mass correlation

Sheldon et al (2003); Tasitomi et al (2004); dark energy applications Hu & Jain (2004)

The National Science Foundation

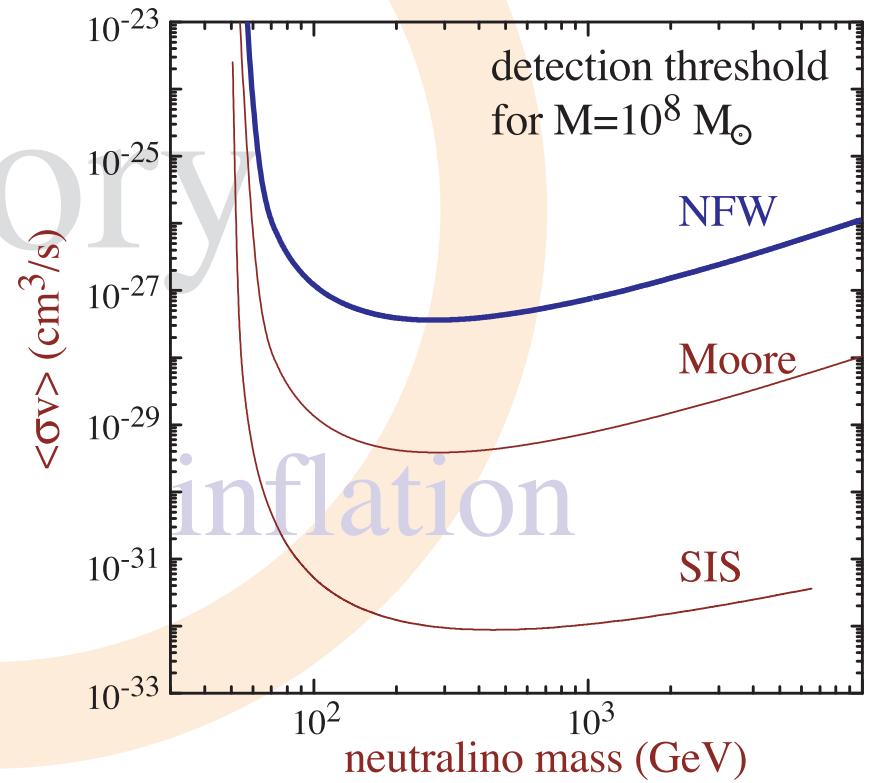

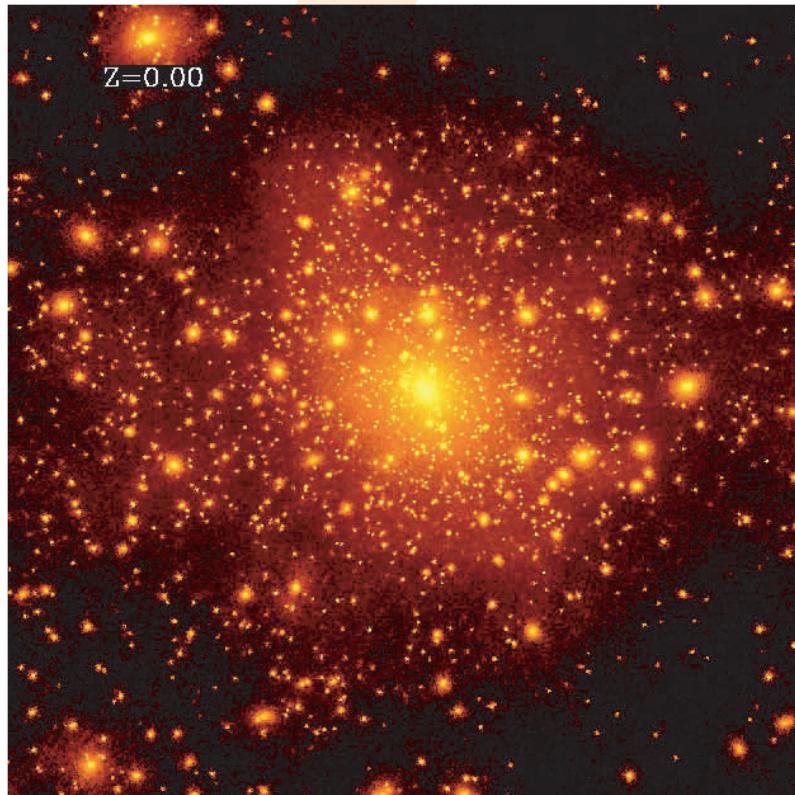

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Substructure

- Annihilation signature in substructure and galactic center? Blasi, Olinto, Tyler (2002); Tasitsiomi & Olinto (2002); Tasitsiomi, Gaskins, Olinto (2003a,b); Aloisio, Gaskins, Olinto (2004)

The National Science Foundation

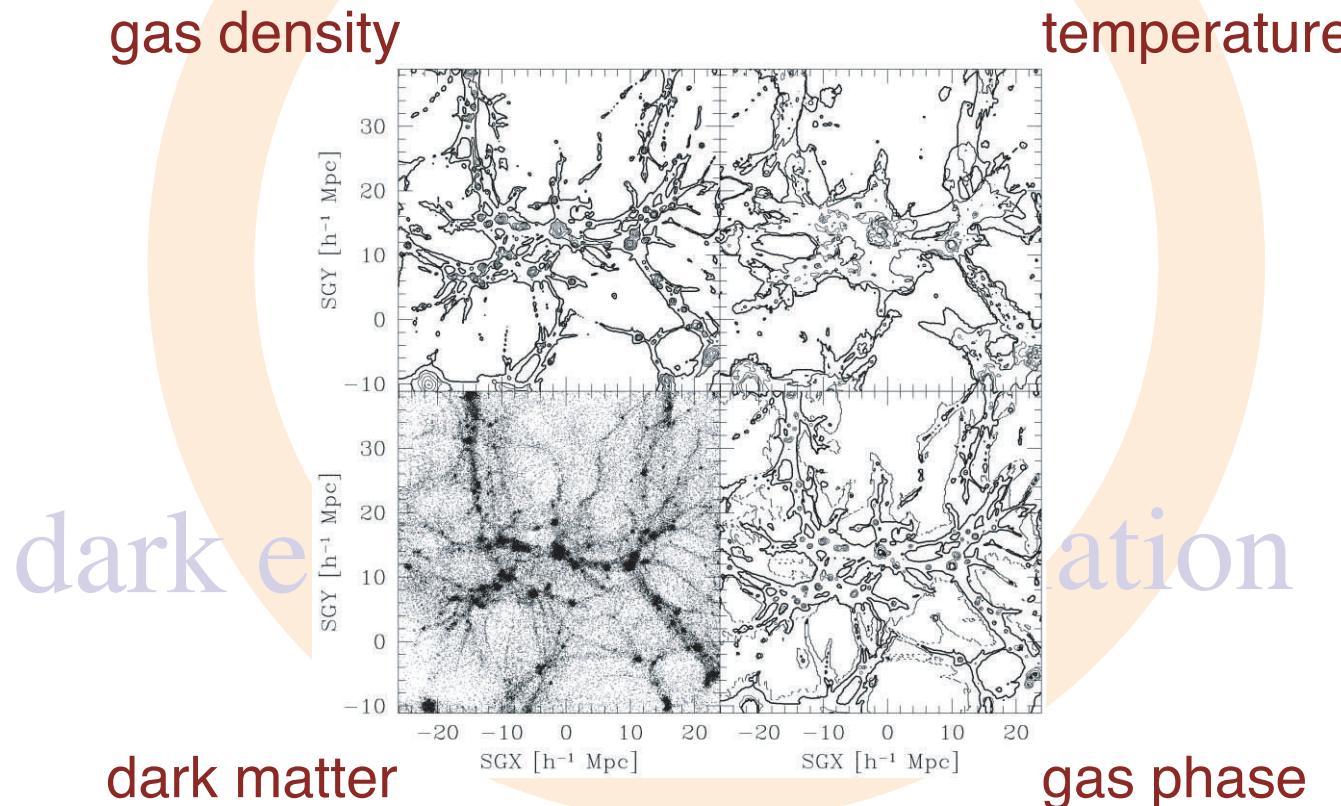

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: Local Supercluster

- Constrained realizations of local supercluster and the UHECR Klypin, Hoffman, Kravtsov, Gottloeber (2001); Kravtsov, Klypin, Hoffman (2002) with CR propagation codes of Olinto (in progress)

The National Science Foundation

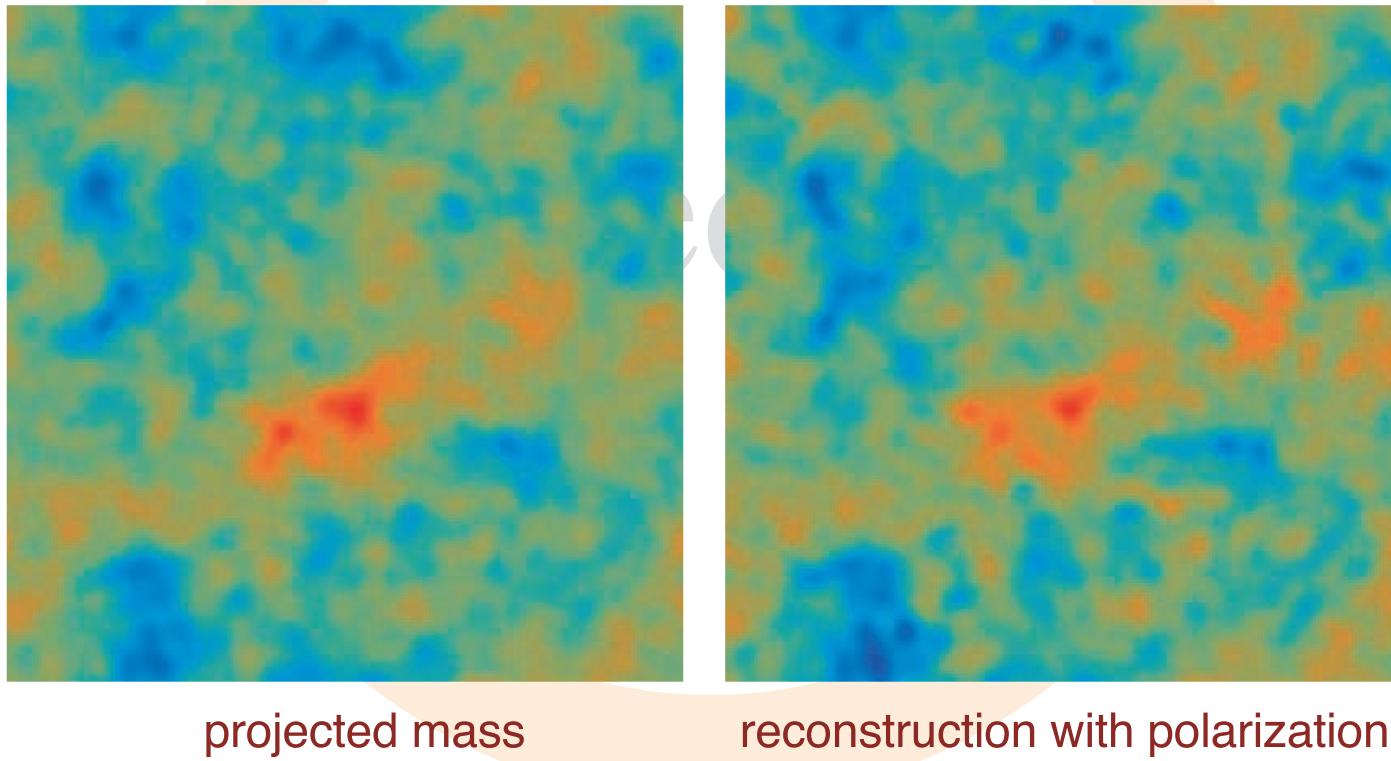

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Matter: CMB Lensing

- Lensing of CMB by large scale structure:  
mass reconstruction, neutrino constraints  
Hu (2001); Hu & Okamoto (2002); Okamoto & Hu (2003); Smith, Hu Kaplinghat (2004)

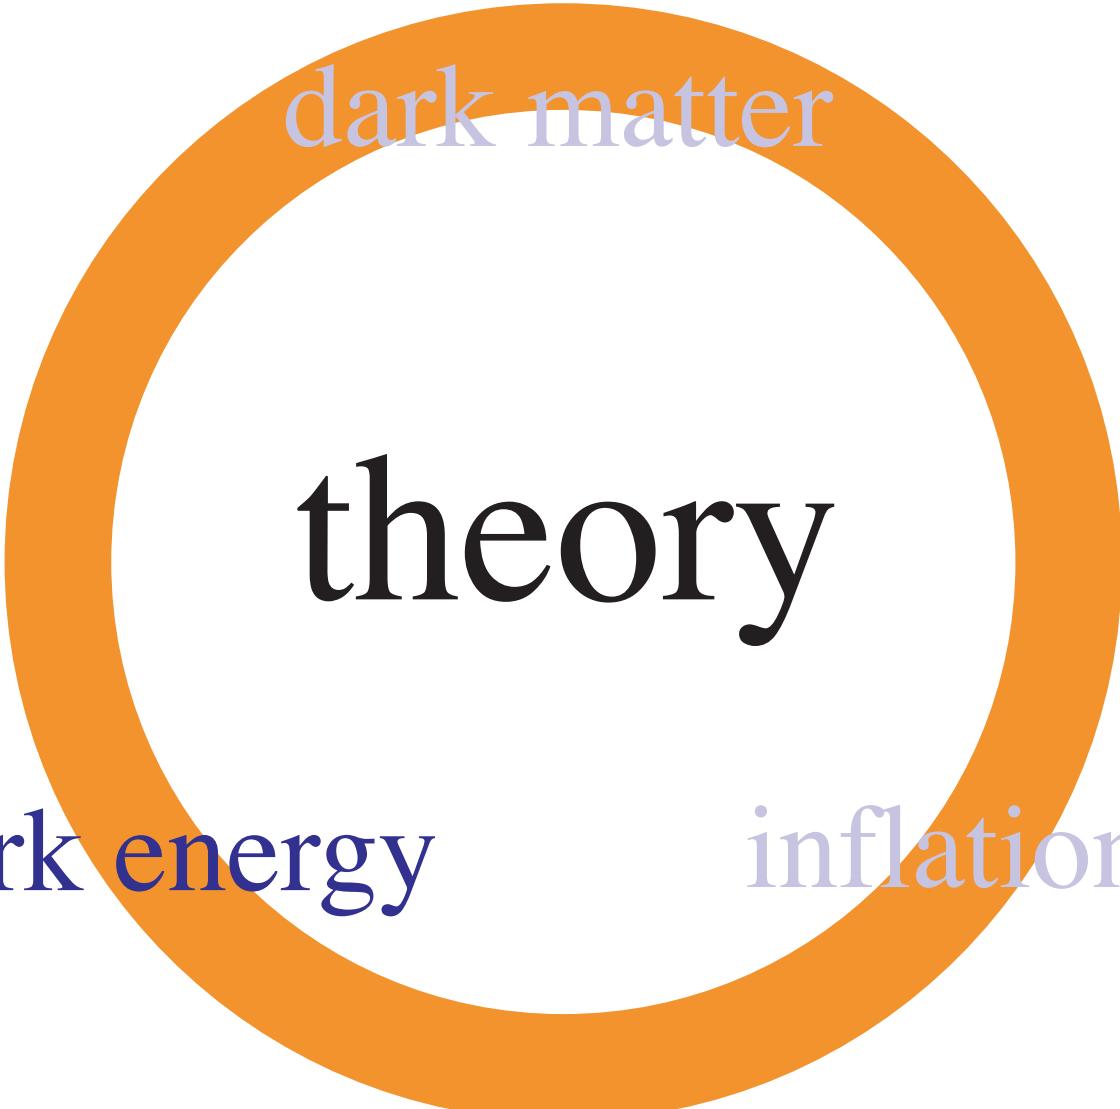

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

dark matter

theory

dark energy

inflation

The National Science Foundation

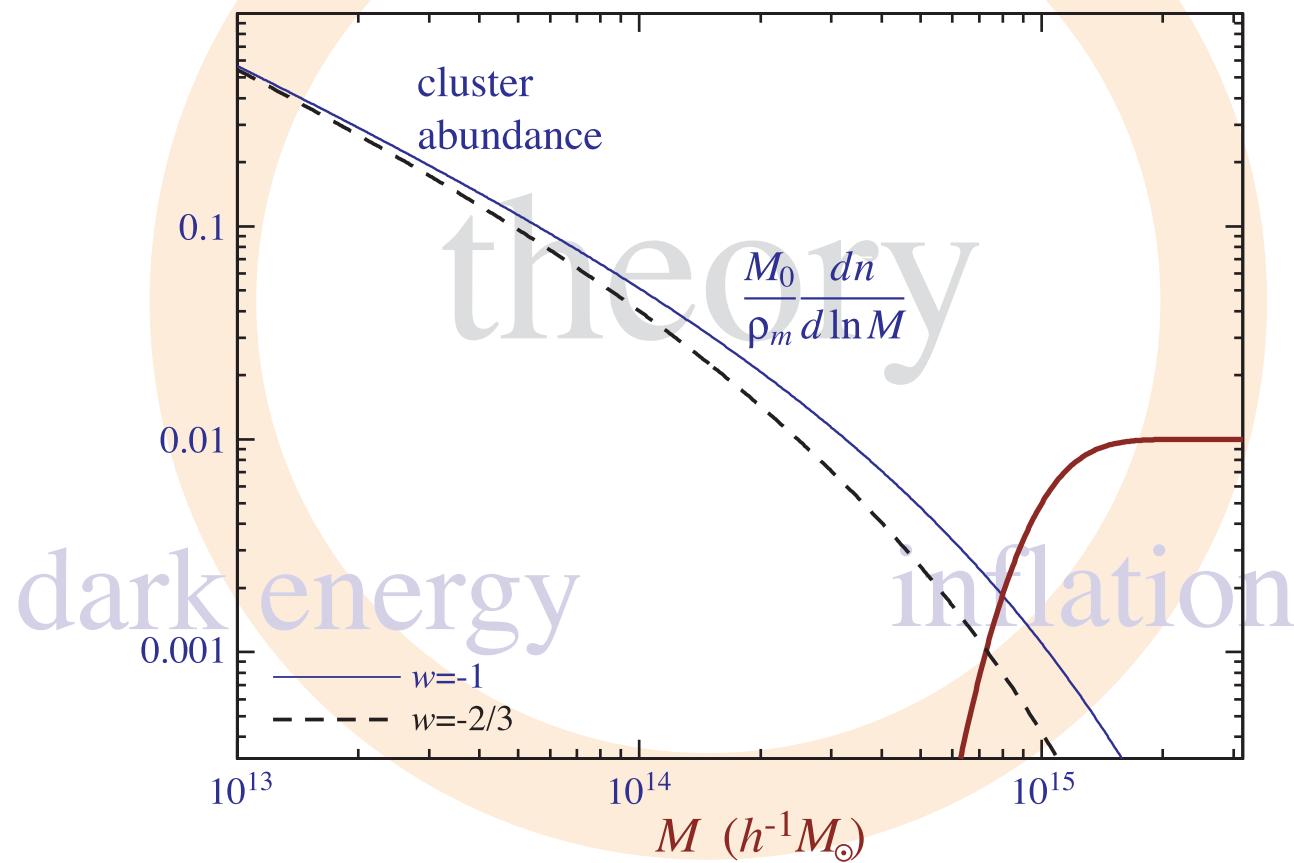

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Energy: Cluster Abundance

- Cluster counts above a given mass are exponentially sensitive to the dark energy

The National Science Foundation

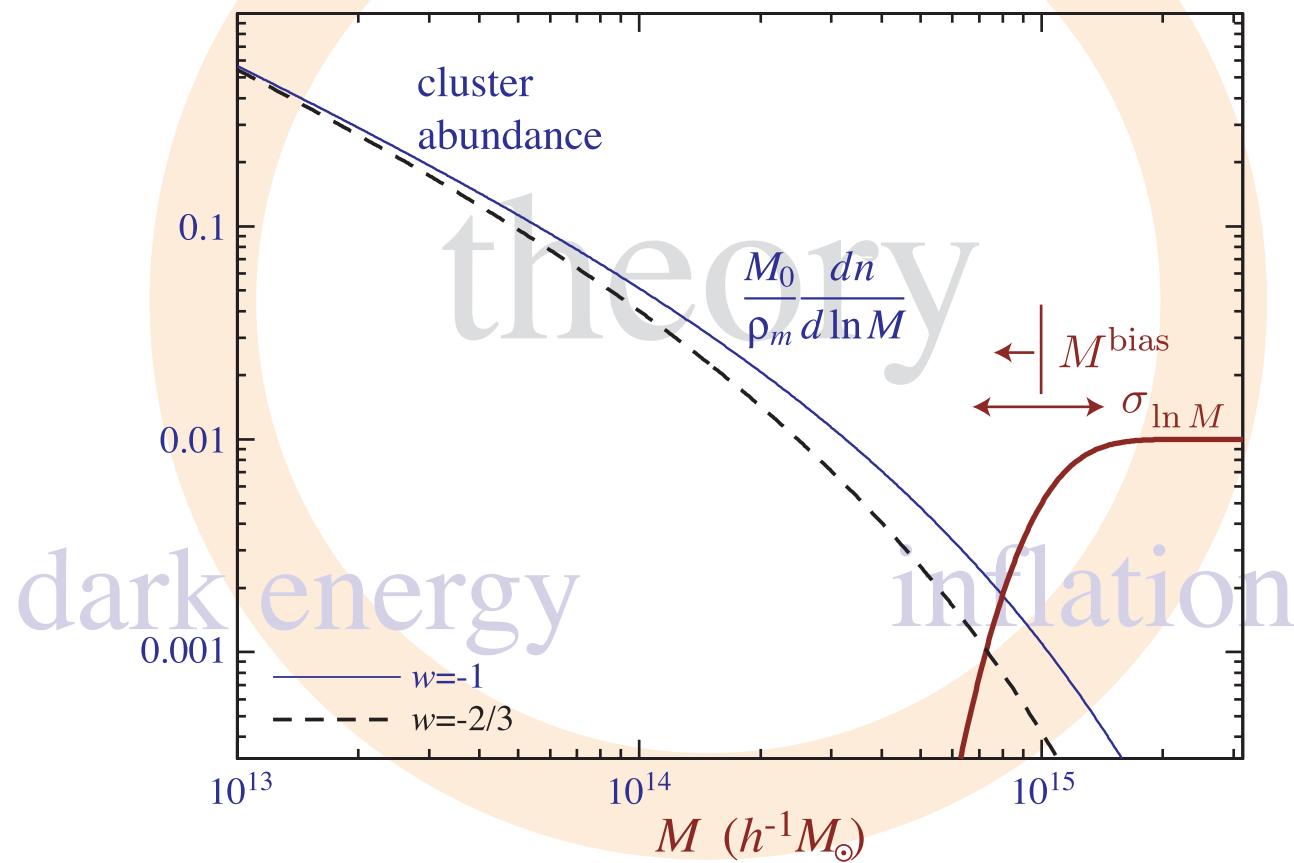

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Energy: Cluster Abundance

- Any uncertainty in the mass selection will degrade cosmological constraints

The National Science Foundation

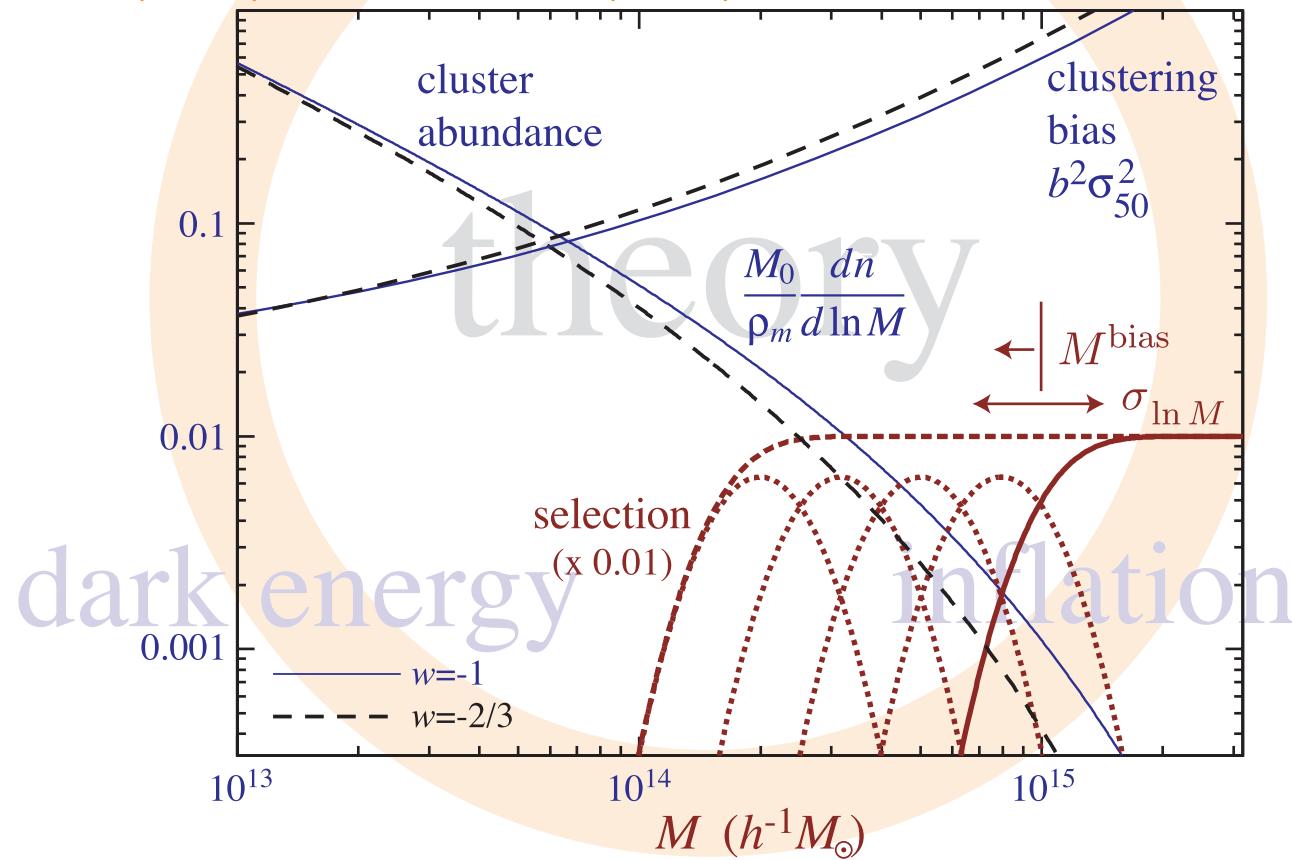

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Energy: Cluster Abundance

- Internal consistency tests allow a degree of self-calibration Hu & Kravtsov (2002); Hu (2003); Lima & Hu (2004); Lima & Hu (2005); Johnston et al (2005)

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

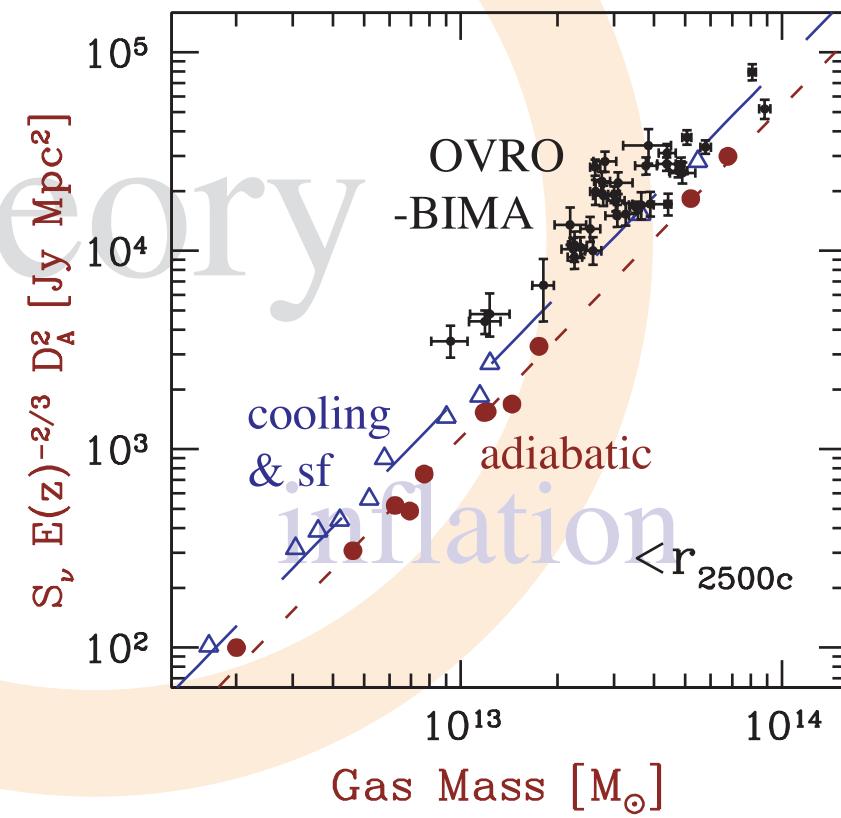

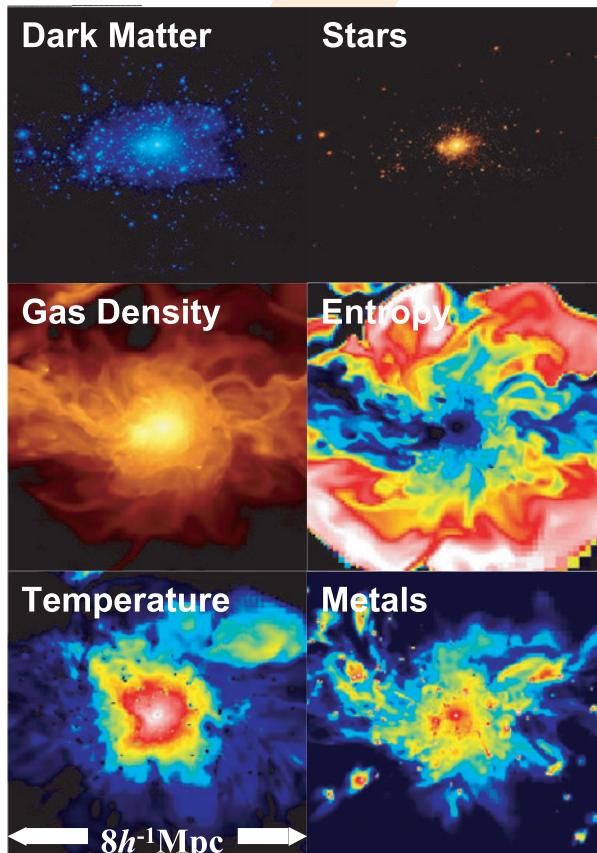

The Kavli Foundation

# Dark Energy: Cluster Abundance

- %-precision dark energy constraints requires deeper understanding of mass-observables

Kravtsov & Nagai (2005); Nagai (2005)

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

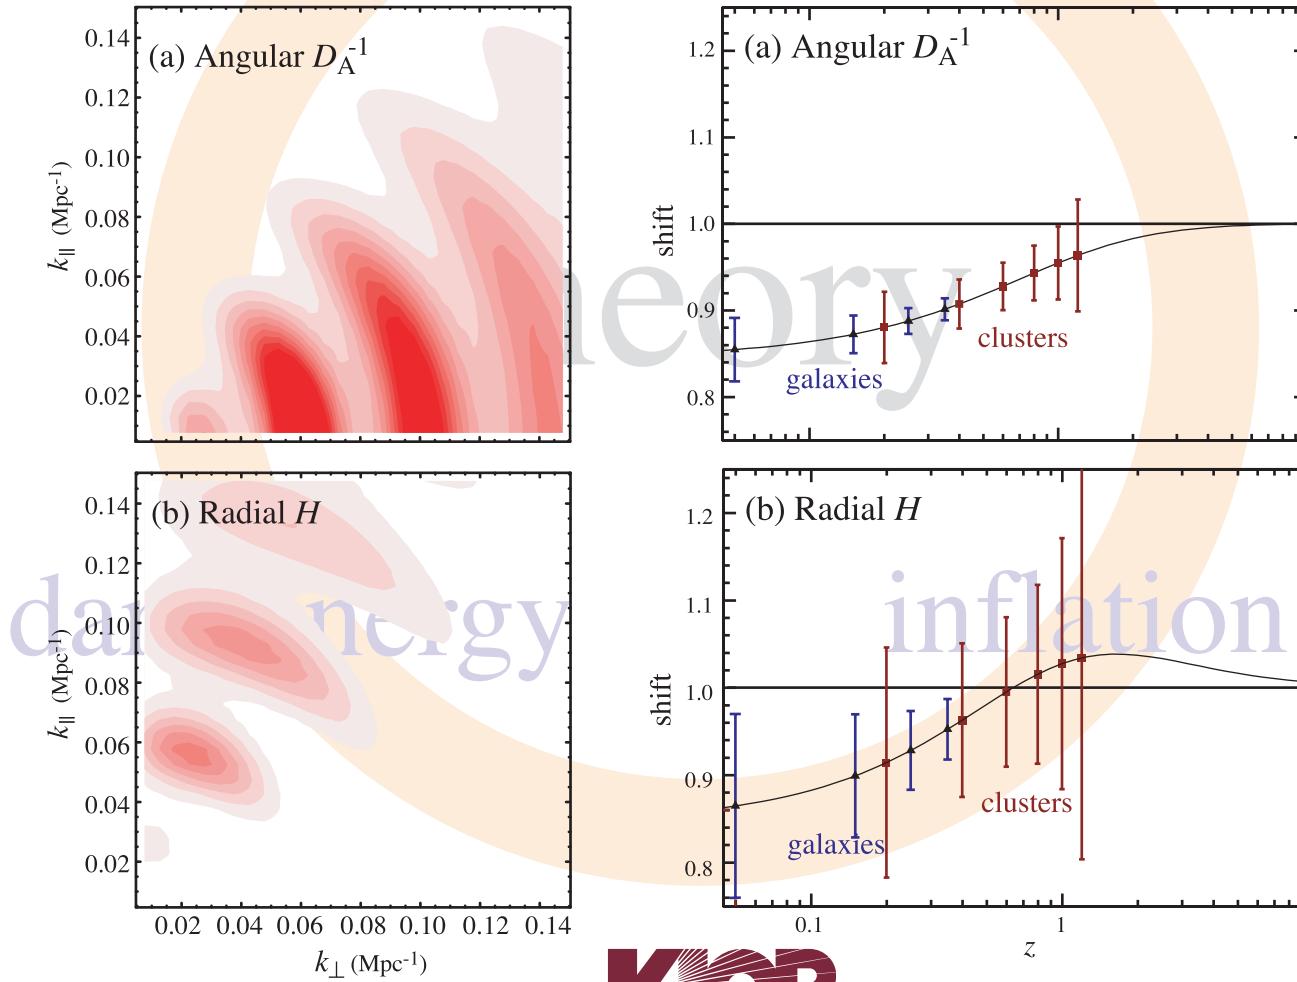

The Kavli Foundation

# Dark Energy: Baryon Oscillations

- Baryon oscillations as standard ruler

Eisenstein, Hu, Tegmark (1998); Cooray, Hu, Huterer, Joffre (2001); Hu, Haiman (2003)

The National Science Foundation

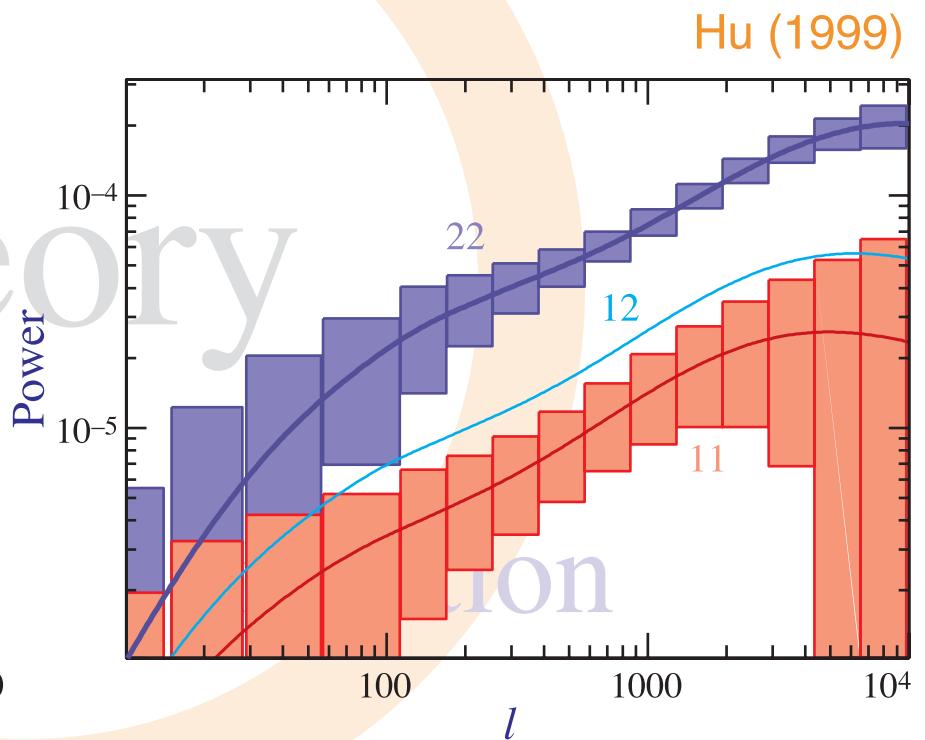

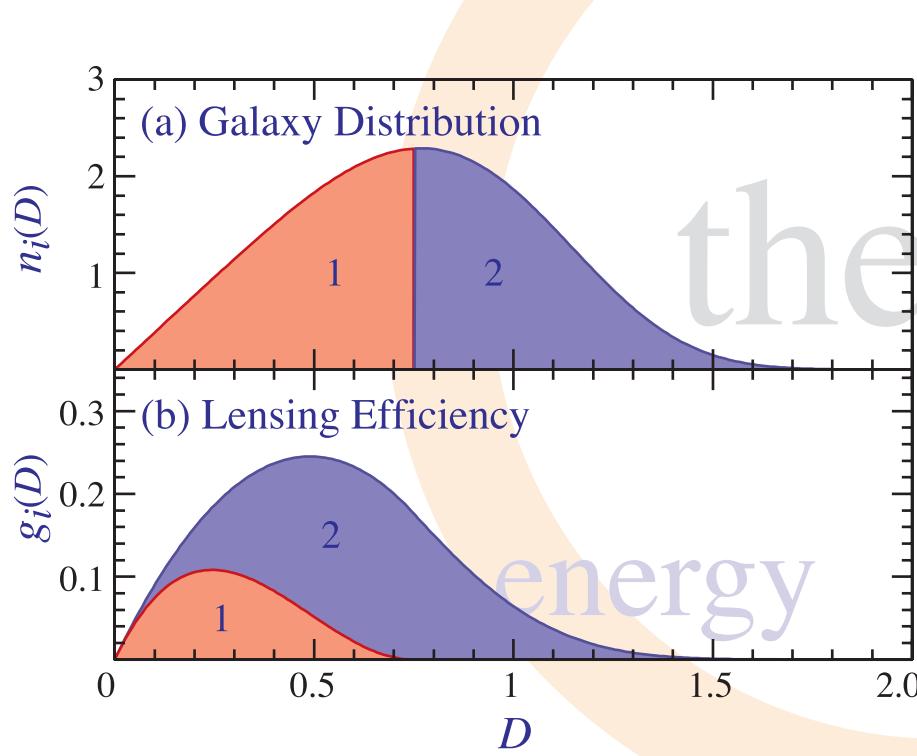

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Energy: Gravitational Lensing

- Gravitational lensing as a function of source redshift: tomographic growth and distances

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

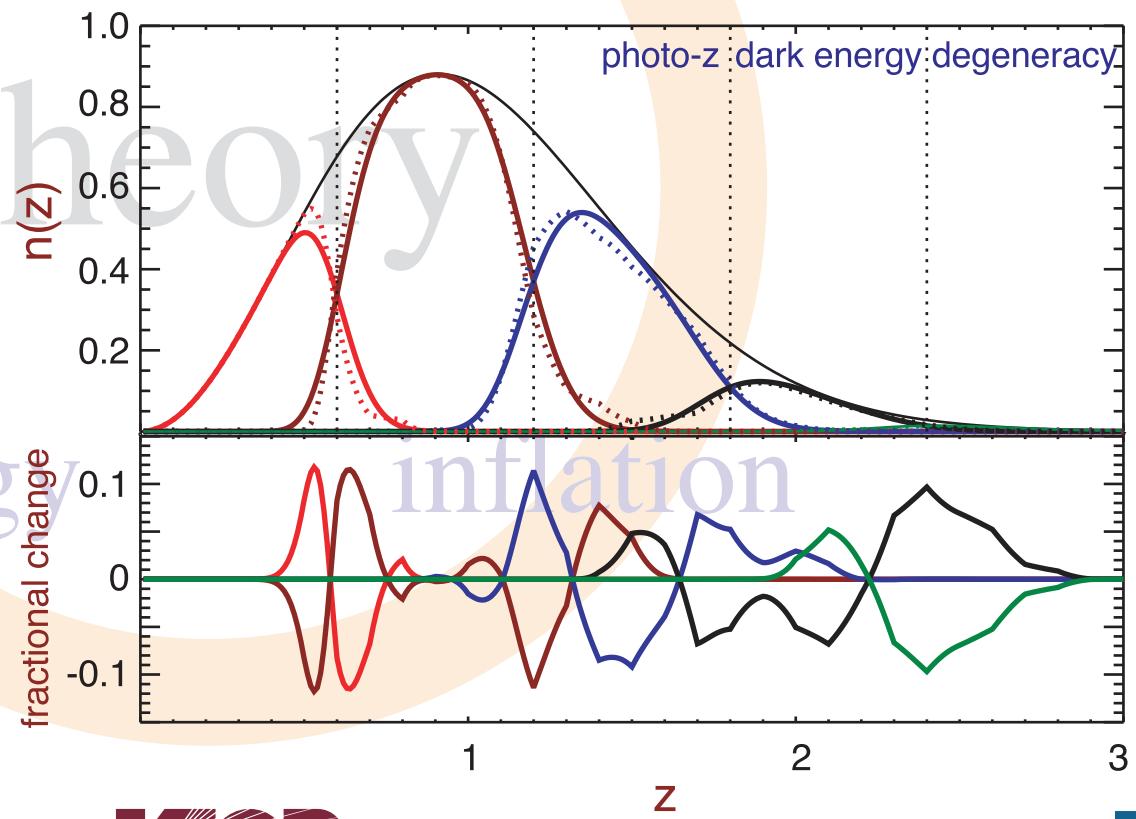

The Kavli Foundation

# Dark Energy: Gravitational Lensing

- Extensions: 3D mass mapping Hu & Keeton (2003); Hu (2003)  
correlations with CMB, galaxies Hu (2002); Hu & Jain (2004)
- Studies of systematic errors in astrophysical modelling and instrument

Huterer & Takada 2004;  
Huterer & White 2005;  
Hagan, Ma, Kravtsov 2005;  
Huterer et al 2005;  
Ma, Hu & Huterer 2005

The National Science Foundation

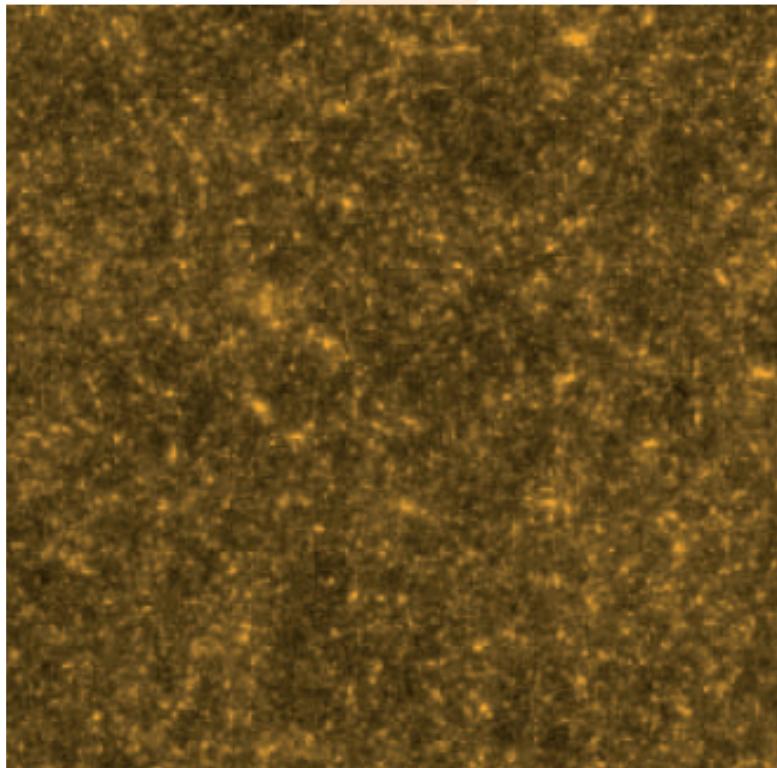

NSF Site Visit – November 28 - 29, 2005

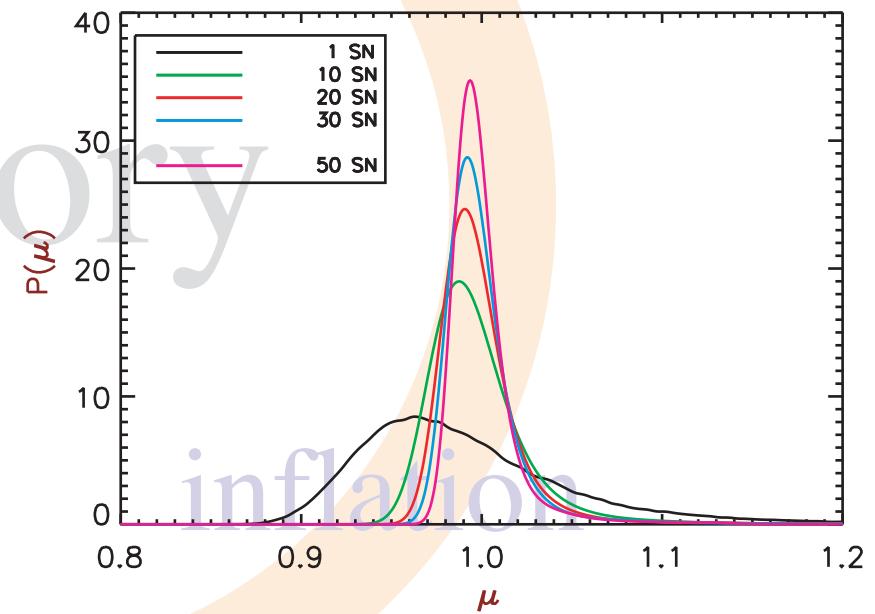

The Kavli Foundation

# Dark Energy: Supernovae

- Gravitational lensing magnification of SNe  
Holz & Linder (2004); Cooray, Holz, Huterer (2005); Cooray, Huterer, Holz (2005)

convergence

1pt magnitude distribution  
2pt correlated by structure

The National Science Foundation

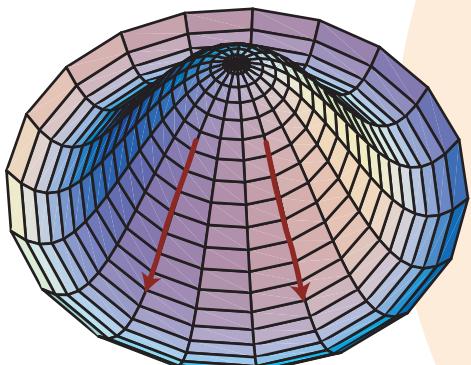

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Dark Energy: Theoretical Models

- Themes:

dark matter  
quintessence and inflation

[Gordon & Hu 2004; Gordon & Wands 2005; Rosenfeld & Frieman 2005]

phantom dark energy & k-essence

[Carroll, Hoffman & Trodden 2003; Hu 2004; Carroll, De Felice & Trodden 2005; Giannakis & Hu 2005]

spatial inhomogeneities

[Hu 2002; Hu & Okamoto 2002; Gordon & Hu 2004; Hu & Scranton 2004]

inflation

alternate explanations of acceleration

[Carroll et al. 2004; Carroll & Lim 2004; Carroll et al. 2005; Knox, Song, Tyson 2005; Song 2005; Song & Hu 2005; Sawicki & Carroll 2005]

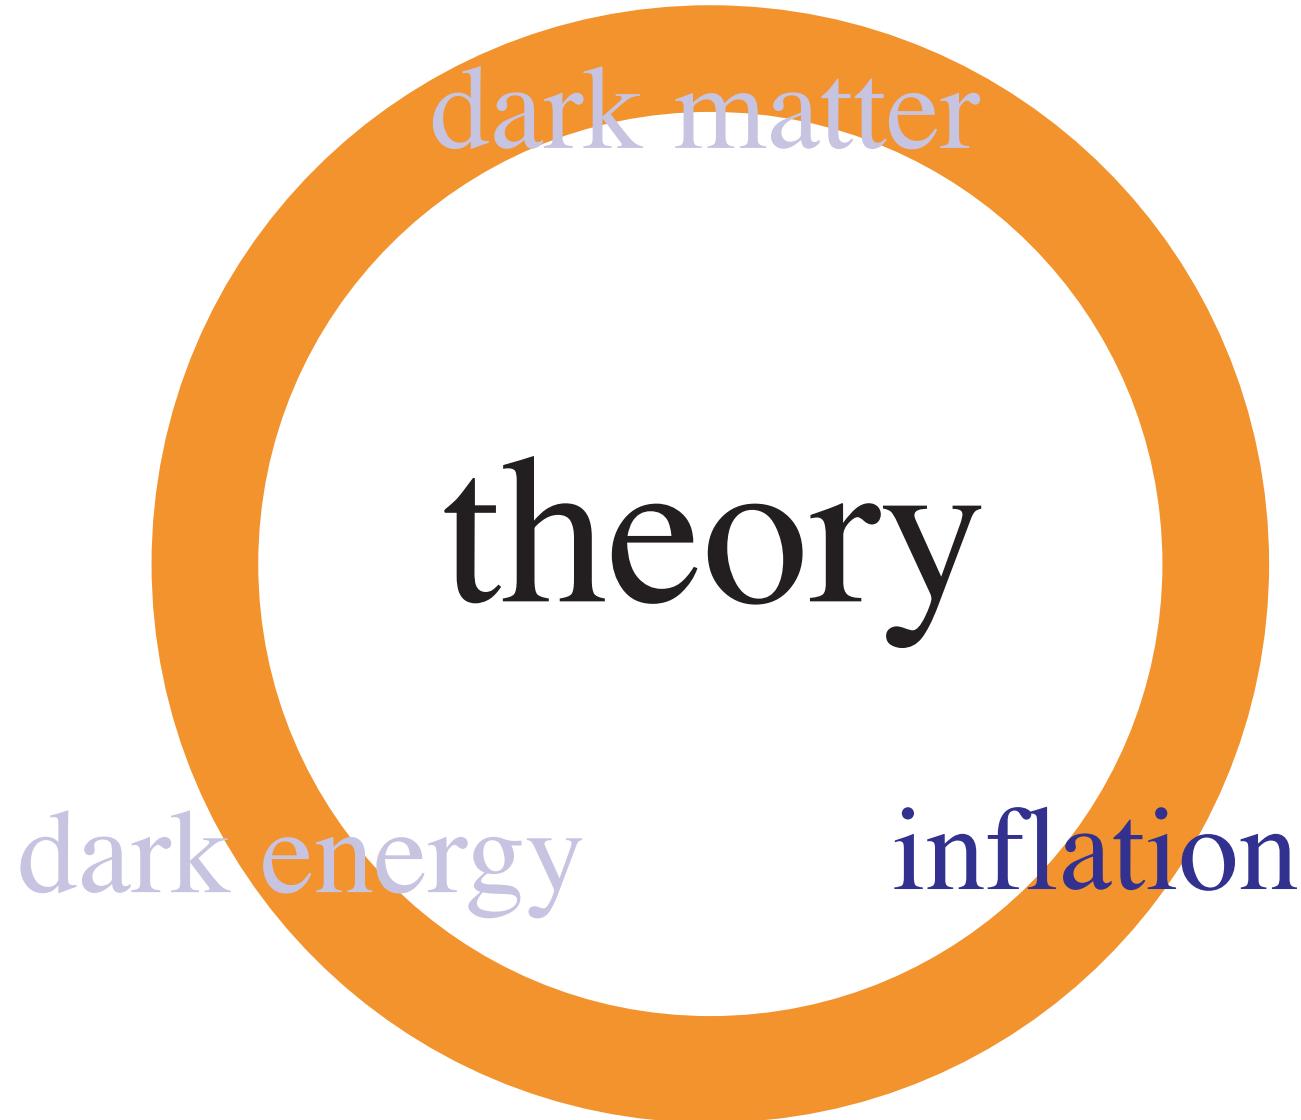

NSF Site Visit – November 28 - 29, 2005

The National Science Foundation

The Kavli Foundation

The National Science Foundation

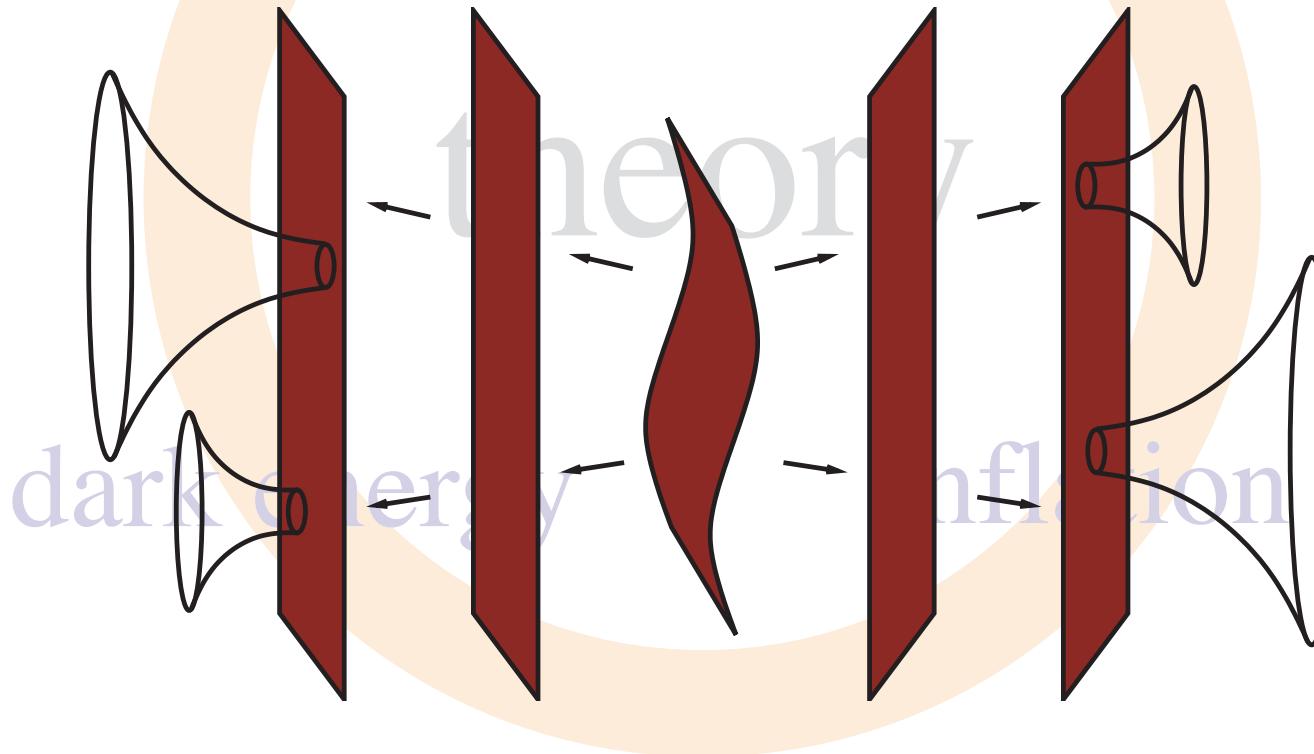

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Inflation: Initial Conditions

- Low entropy initial conditions for inflation as thermal fluctuations in deSitter [Carroll & Chen 2005]

The National Science Foundation

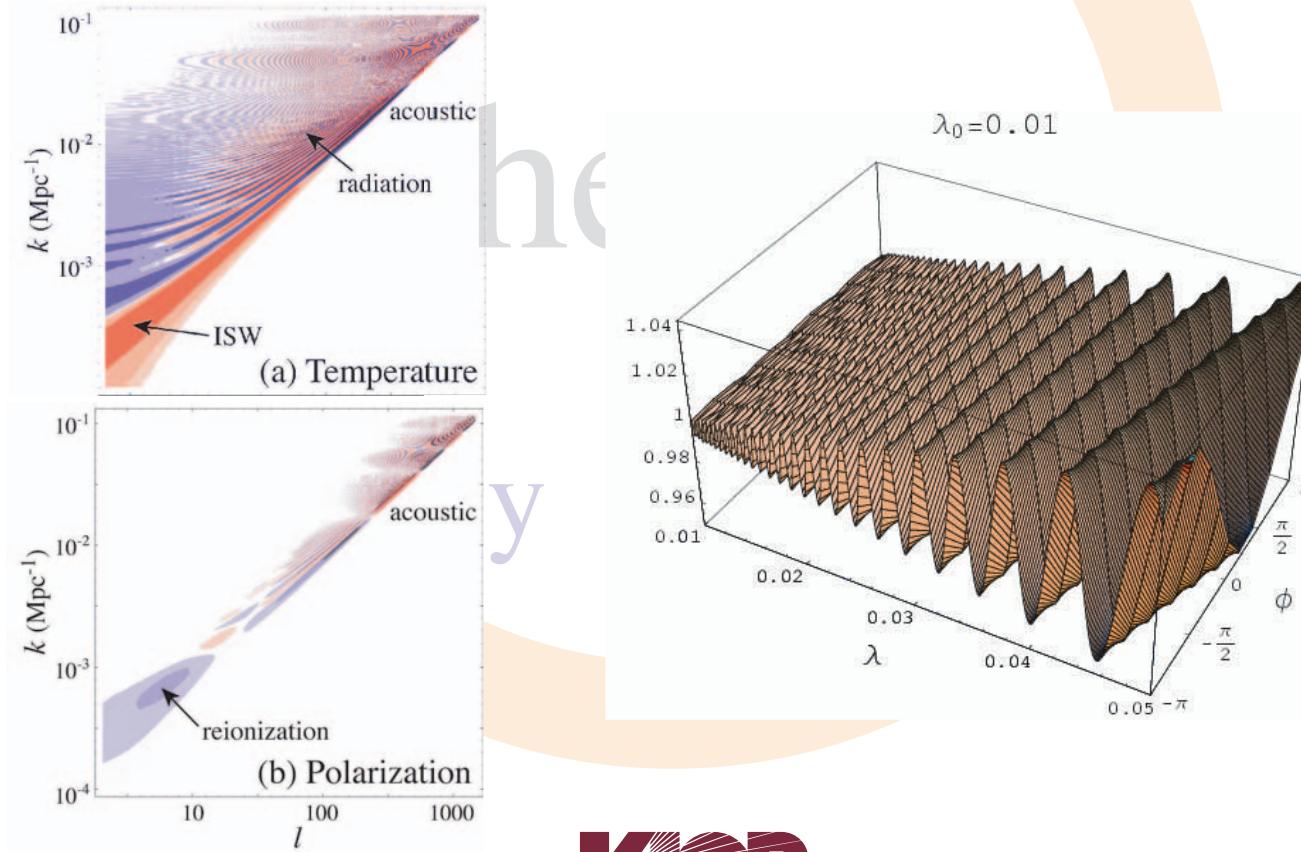

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Inflation: Features in P(k)

- Features in the potential and trans-planckian physics generates features in power spectrum  
Hu & Okamoto (2004); Easter, Kinney & Peiris (2005a,b); Kadota, Dodelson, Hu Stewart (2005)

The National Science Foundation

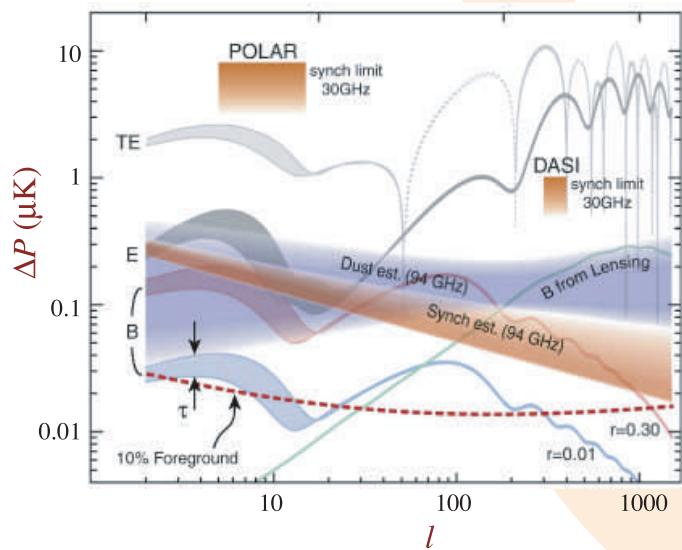

NSF Site Visit – November 28 - 29, 2005

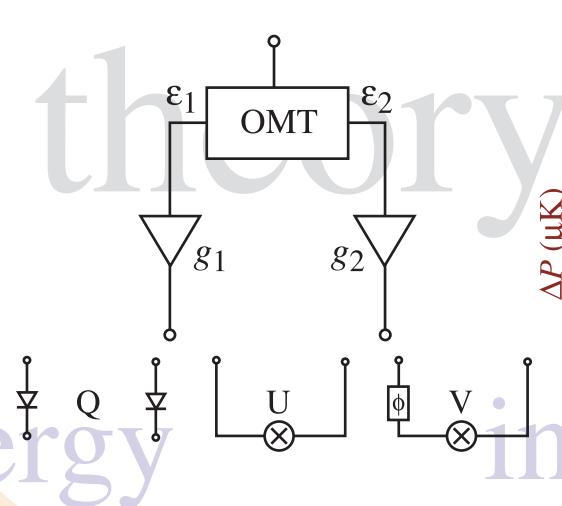

The Kavli Foundation

# Inflation: Gravitational Waves

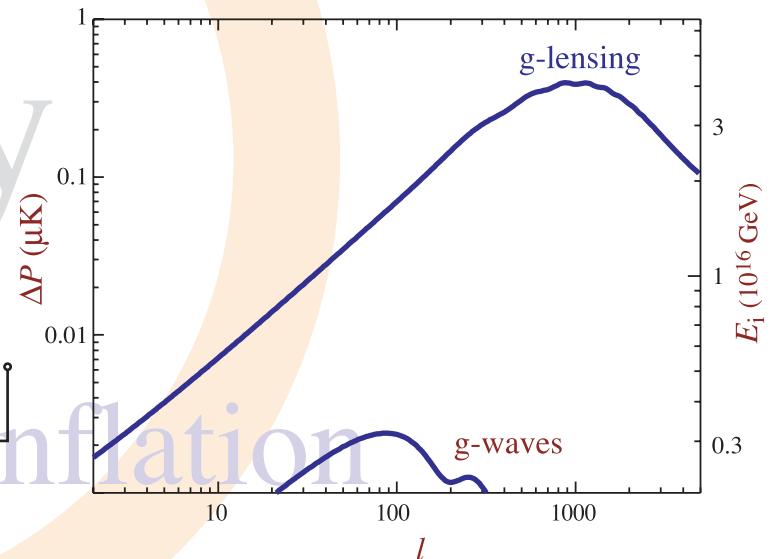

- Challenges for detecting gravitational waves  
Hu, Hedman, Zaldarriaga (2002); Hu & Okamoto (2002); Knox & Song (2003);  
Verde, Peiris, Jimenez (2005); Smith (2005)

astrophysical

instrumental

cosmological

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

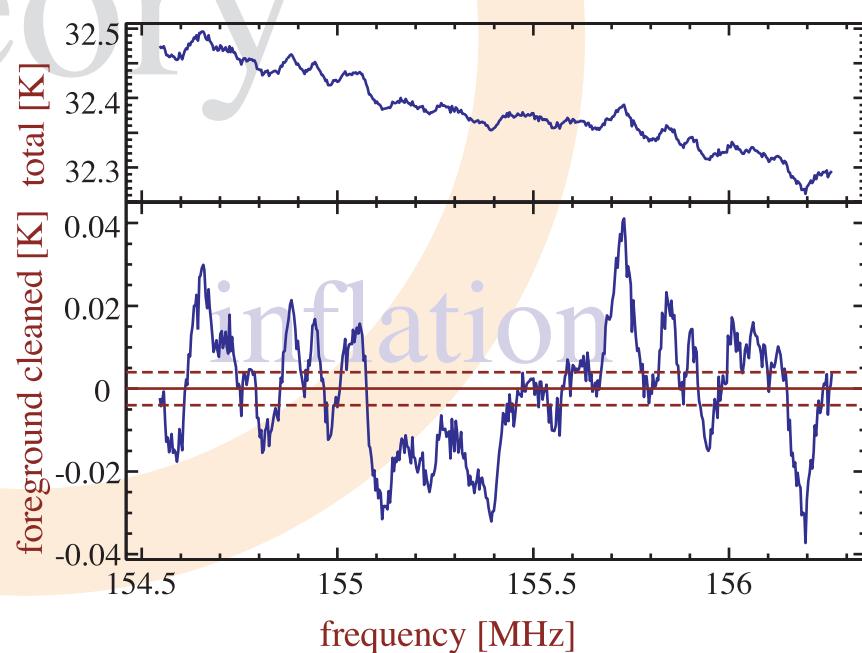

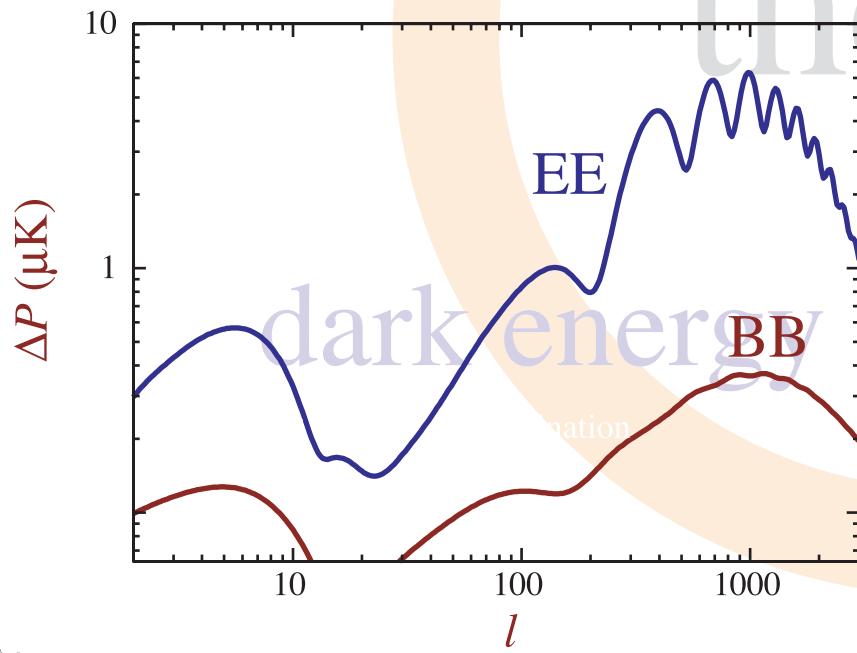

The Kavli Foundation

# Inflation: Gravitational Waves

- Reionization potentially highest S/N gravitational wave B-modes - test scale invariance
- Interpretation requires study of reionization through e.g. E-mode spectrum, 21 cm emission

Hu & Holder (2004); Wang et al (2005); Wang & Hu (2005)

The National Science Foundation

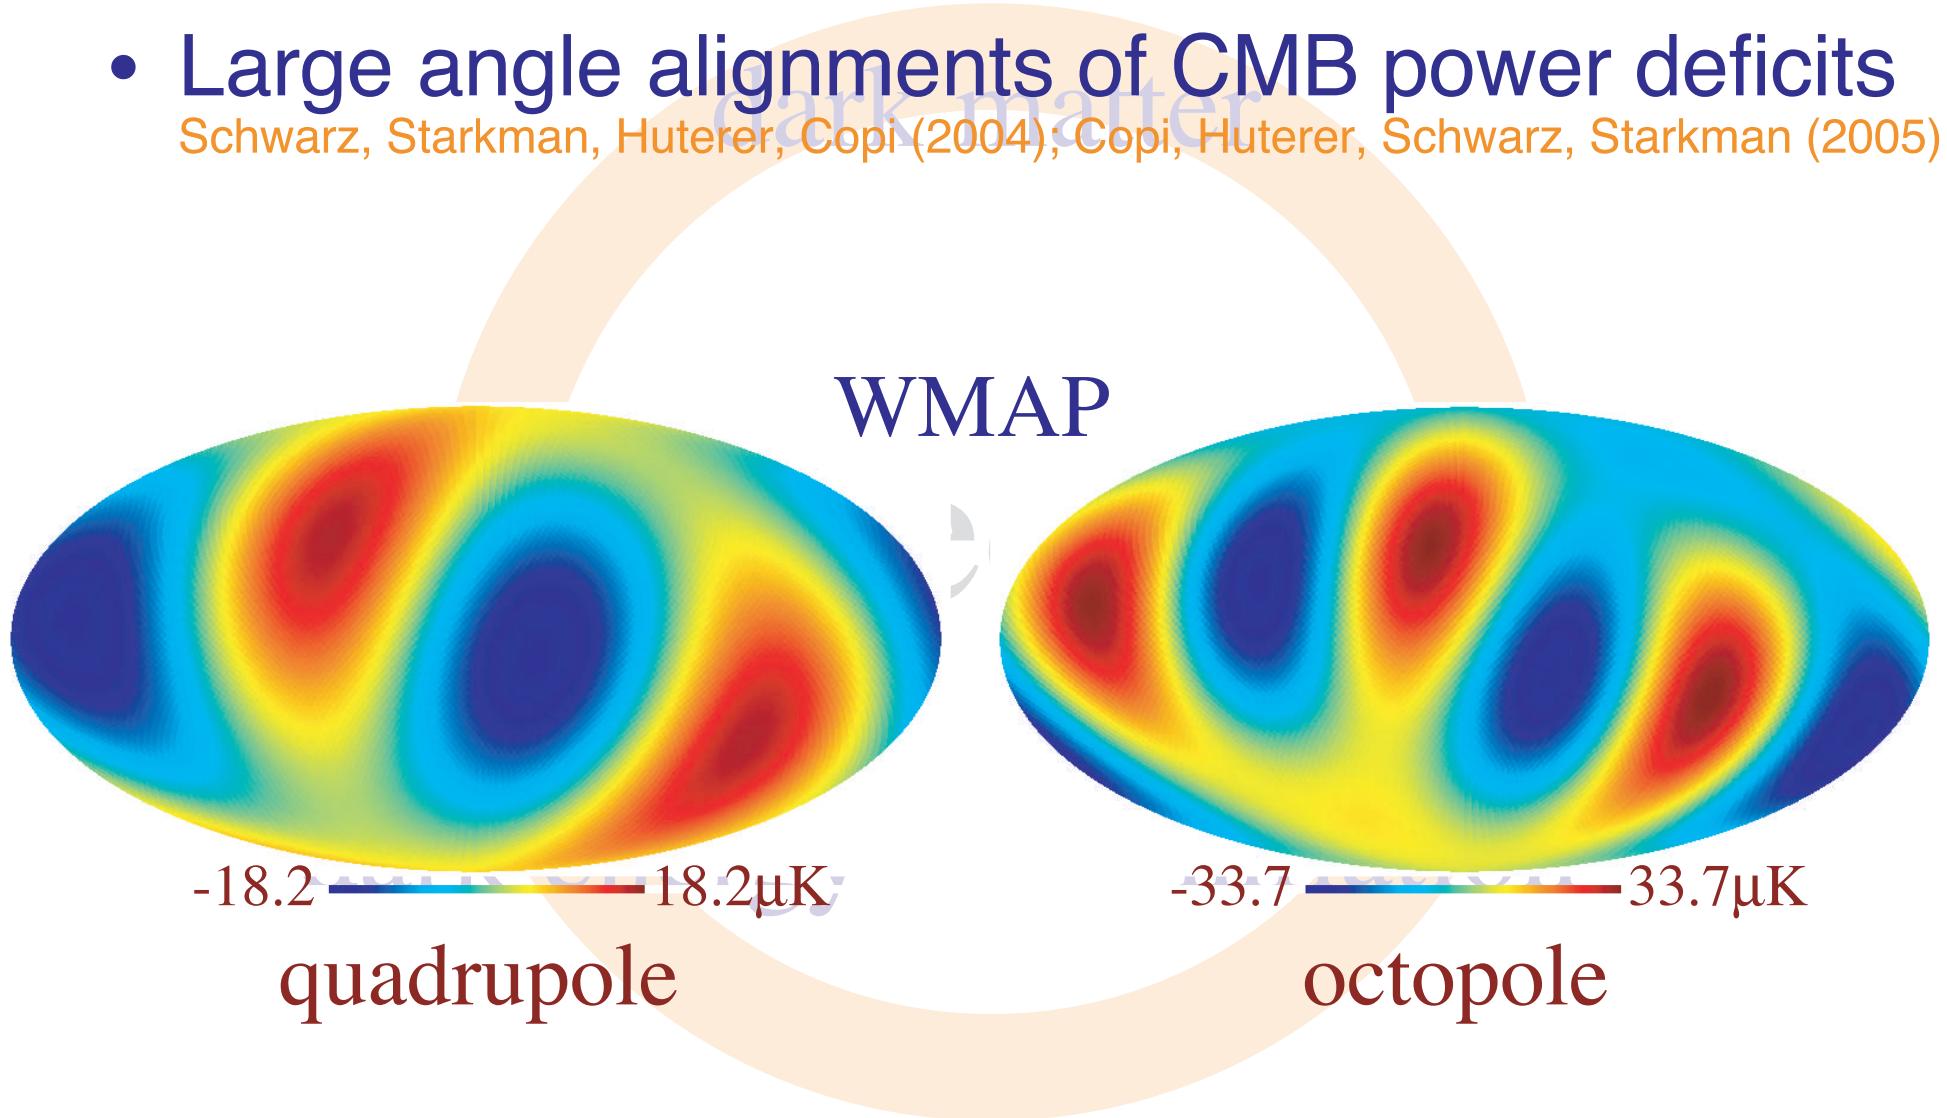

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Inflation: Low Multipole Anomalies

- Large angle alignments of CMB power deficits  
Schwarz, Starkman, Huterer, Copi (2004); Copi, Huterer, Schwarz, Starkman (2005)

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

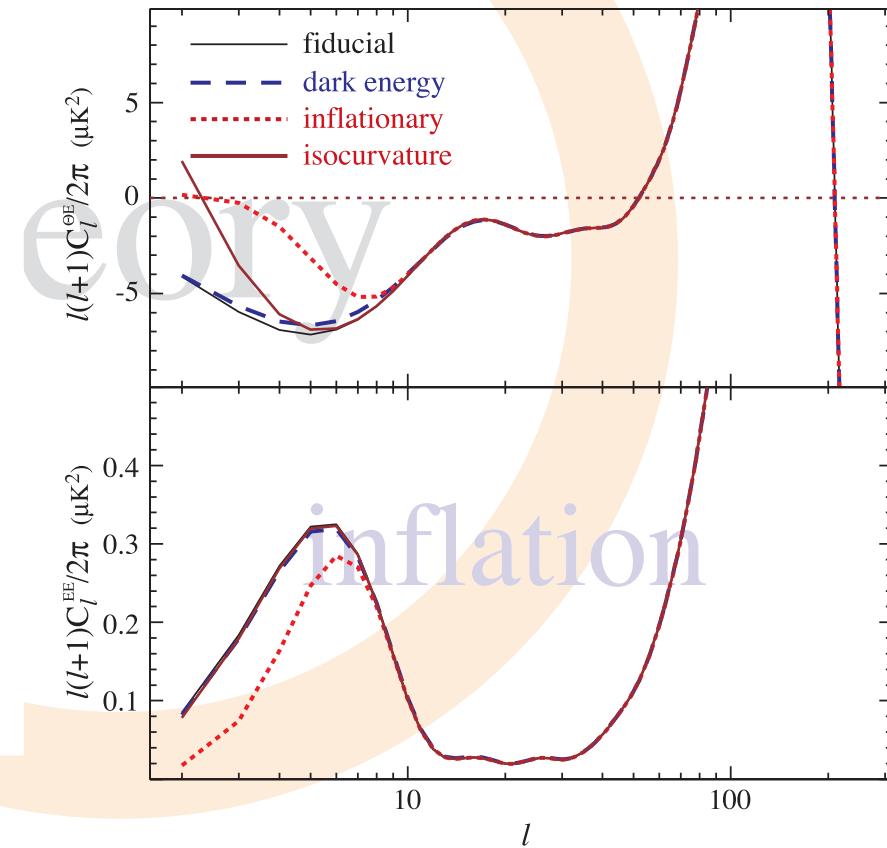

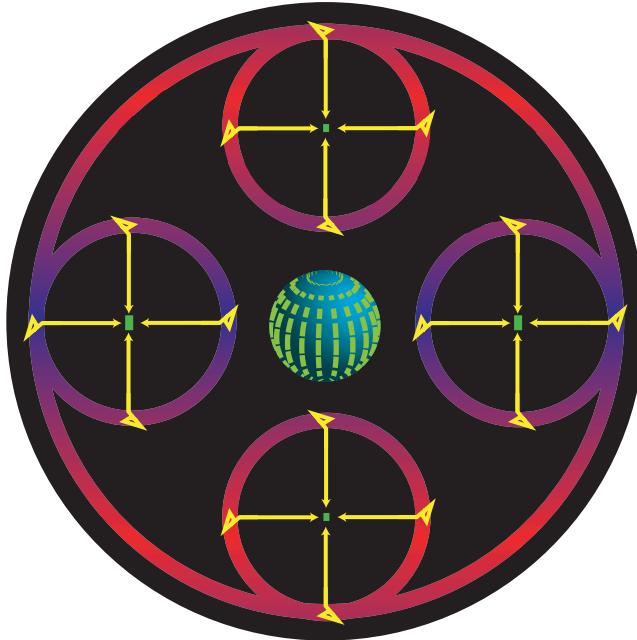

The Kavli Foundation

# Inflation: Low Multipole Anomalies

- Modulated inflationary initial conditions vs dark energy distinguished by polarization

Gordon & Hu (2004); Gordon, Hu, Huterer, Crawford (2005)

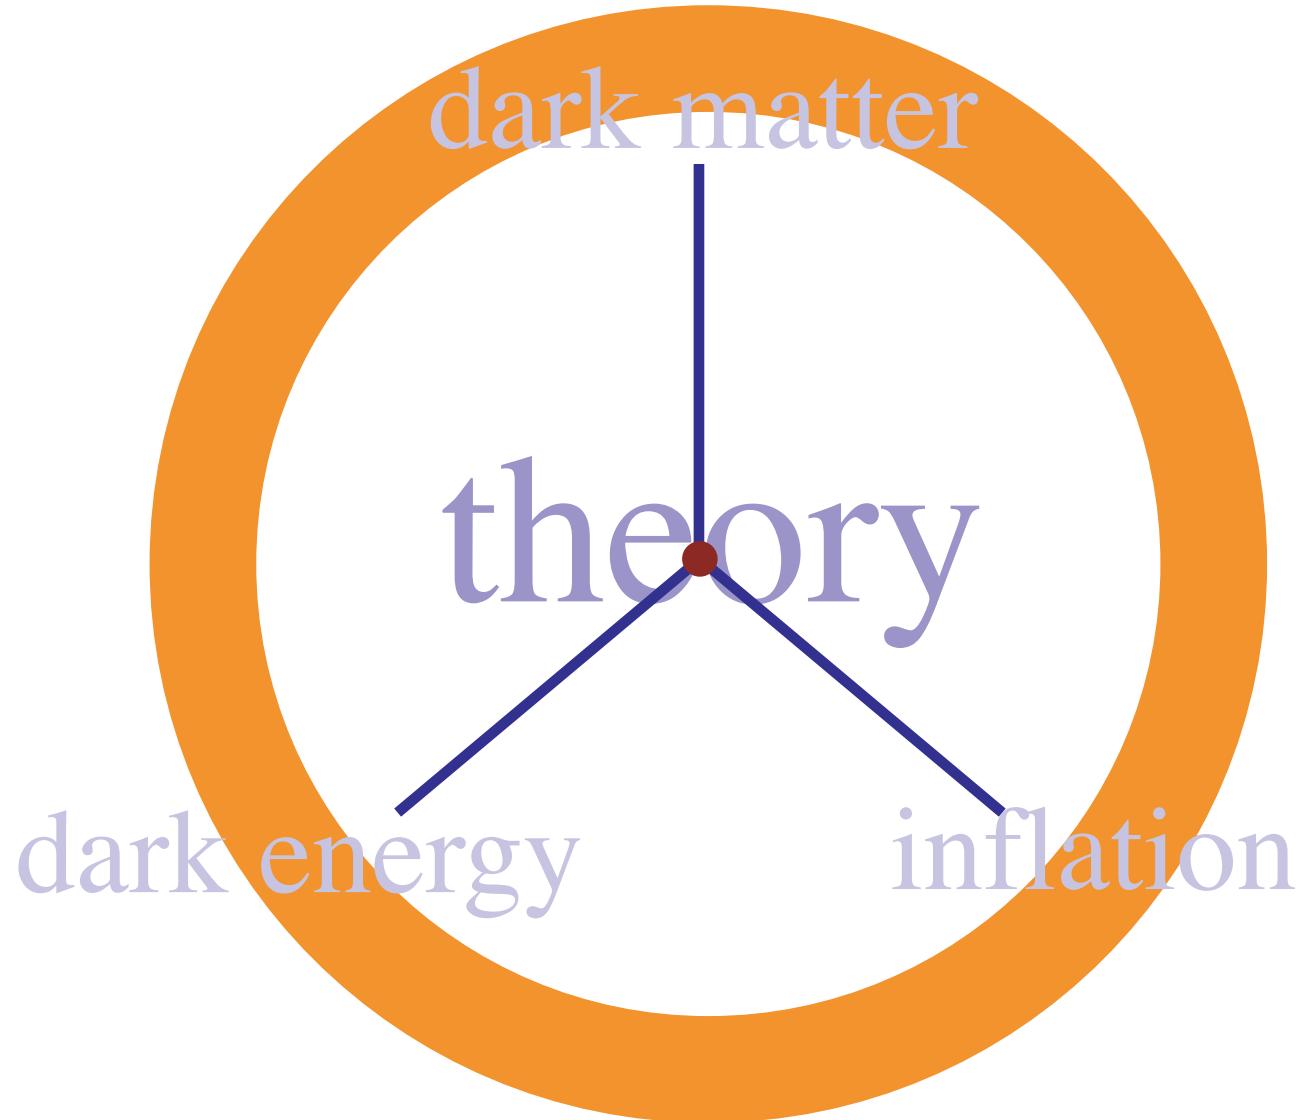

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

The National Science Foundation

NSF Site Visit – November 28 - 29, 2005

The Kavli Foundation

# Theory: Intangibles

- Close interactions with experimentalists
- Training ground for postdocs and students
- Broader impact of visitors program, workshops

THE DAMPING WING OF THE GUNN-PETERSON ABSORPTION AND Ly $\alpha$  EMITTERS IN THE PRE-REIONIZATION ERA

NICKOLAY Y. GNEDIN<sup>1,2</sup> AND FRANCISCO PRADA<sup>2,3</sup>  
*Received 2004 March 15; accepted 2004 May 5; published 2004 May 13*

<sup>1</sup> Center for Astrophysics and Space Astronomy, University of Colorado at Boulder, 389 UCB, Boulder, CO 80309; gnedin@casa.colorado.edu.

<sup>2</sup> Visitor at the Kavli Institute for Cosmological Physics, University of Chicago.

<sup>3</sup> Ramón y Cajal Fellow, Instituto de Astrofísica de Andalucía (CSIC), Apartado Correos 3005, E-18080 Granada, Spain; fprada@iaa.es.

We thank A. Kravtsov for valuable comments and the Kavli Institute for Cosmological Physics at the University of Chicago for hospitality during the time this Letter was initiated. We also thank the anonymous referee for detailed and constructive comments that significantly improved the original manuscript. This work was supported in part by NSF grant AST 01-34373 and by the National Computational Science Alliance under grant AST 02-0018N and utilized the IBM P690 array at the National Center for Supercomputing Applications.

<sup>3</sup> Ramón y Cajal Fellow at the Instituto de Astrofísica de Andalucía (CSIC), Apartado Correos 3005, E-18009 Granada, Spain; fprada@iaa.es.

We thank A. J. S. Hamilton for useful comments and the Kavli Institute for Cosmological Physics at the University of Chicago for hospitality during the time this Letter was initiated. We also thank the anonymous referee for detailed and constructive comments that greatly improved the original manuscript. This work was supported in part by NSF grant AST 01-34373 and by the Kavli Institute for Cosmological Physics, a Computational Science Alliance under grant AST 01-34373. Computation was performed on the CRAY T3E and utilized the IBM P690 array at the National Center for Supercomputing Applications.
