

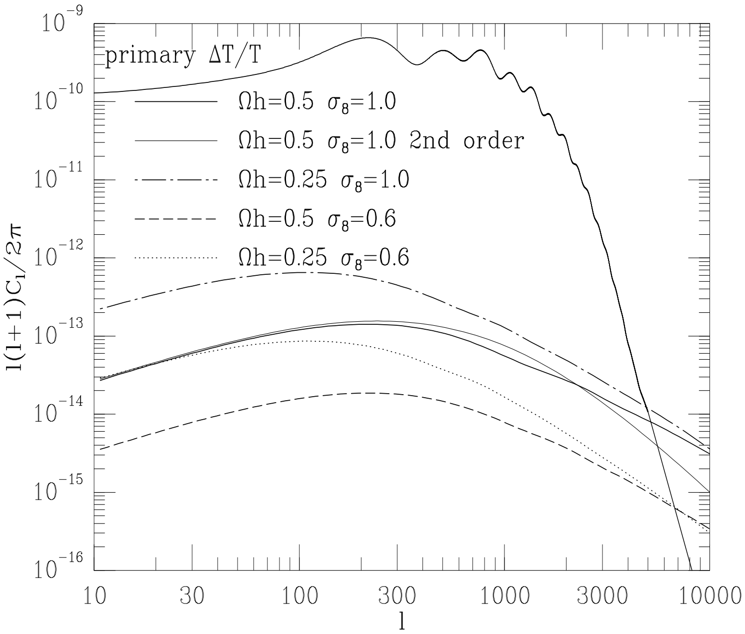

Fig. 3.— RS contribution to the angular power spectra $l(l+1)C_l/2\pi$ for various CDM models. Also plotted is the RS effect for the standard CDM case from the second order calculation and the primary contribution to the spectrum for a COBE normalized adiabatic CDM model ($h = 0.5$, $\Omega_{b0}h^2 = 0.05$), adopted from Bode & Bertschinger (1995).
